(54) Title: TRANSFLECTIVE DISPLAY

(57) Abstract: A display unit and a portable electronic device comprising the same is disclosed, whereby the display unit provides two modes of operation, that combines peak performance of an emissive display with a transfective ability to be read without back-lighting. In this way a brilliant display with saturated colours and high luminance, and a display that in strong sunlight is still possible to be read is provided. The display unit comprises a display layer (5), at least a reflector (2), a colour filter layer (4), and a backlight.
